

GOLD STRATEGY 1 by PRINCE LOGAN

CLICK THE TELEGRAM RIBBON ON THE APPs HOMEPAGE AND JOIN MY FREE TELEGRAM GROUP FOR FREE GOLD SIGNALS DAILY AND CUSTOMER SUPPORT.

Take Note:

Gold is always **BUYING**

Key areas to focus on.

Remember, do not mix this strategy with any other strategy. Clear your mind before you learn this strategy. This strategy does not require the use of indicators except the **ICT PERIOD SEPARATOR**.

Remember, the success of every trader rests on constant practice. Keep testing this strategy on your demo account, back test and front test for months, patience is key. Rome was not built in a day.

Remember to click the telegram ribbon icon on the apps homepage to join my free telegram forex signals group on telegram to get in touch with my team directly and utilize our free signals as well.

BONUS KNOWLEDGE

SET UP YOUR CHART USING ICT PERIOD SEPARATORS

Set your visibility parameters for the indicator as shown above and inputs as shown below.

FXN - Week and Day Separator

Inputs **Style** **Visibility**

☒ Show Day Separator and Days of Week on 1 hour Chart

☒ Use Background Separator, rather than Lines (Please Note: The show day separator line option above, still needs to be checked to show either type of day separator) - Using the background separator option may be preferred if you would prefer to see unlimited separators. This is especially useful when working with zoomed out charts. To change the color, transparency please use options that can be found on the style tab. The options above will have no impact on background separators.

☒ Show days of week

☒ Use short names for days of week (Mon, Tue...)

Monday Text Color: silver

Tuesday Text Color: silver

Wednesday Text Color: silver

Thursday Text Color: silver

Friday Text Color: silver

Use two default mt4 Bollinger bands indicators, each should have the parameters above. Set your colours etc per your taste.

Remember, we are swing traders so for this strategy, H1 is preferred.

Below is a buy valid signal screenshot

Rules:

Wait for the price to enter the zone between the blue and yellow zone, (remember, you can use your own colours)

Make sure you have a minimum of two-three red candle sticks, don't trade if it crosses the yellow zone, now wait for the first green candle to form if it forms and touches the blue line and closes on the blue line or above the blue line, enter immediately on the new candle forming and use your tp as the second blue line above for a minimum of 150-200 pips or set it to the yellow line above for a minimum of 300-500 pips. Use a 1:1 ratio to set your sl. Remember to secure profits after 100+ pips.

Rules for a Sell trade is the same format inversely. Screenshot is below as well.
